

NAPCO Nucleus — Setup Guide for Atik

Record-and-push developer PC • Project kept on the C: drive • ~15 minutes

Your PC only **records** Teams calls and **uploads** them to the central server. Follow the steps in order. Titu will send you two files — **.env** and **google-credentials.json** — over direct message (never on group chat).

Step 1 — Install Git, Python and ffmpeg

Open **PowerShell** and run these three lines (accept any prompts):

```
winget install --id Git.Git -e --source winget
winget install --id Python.Python.3.12 -e --source winget
winget install --id Gyan.FFmpeg -e --source winget
```

ffmpeg is important — it shrinks each recording about 15× so your disk stays small. After this, **close and reopen PowerShell** so the new tools are found.

Step 2 — Download the project to your C: drive

```
git clone https://github.com/napco-labs/napco-nucleus.git C:\napco-nucleus
```

The whole project now lives in **C:\napco-nucleus**.

Step 3 — Add the two files from Titu

Copy the **.env** and **google-credentials.json** files Titu sent you into the folder **C:\napco-nucleus** (paste them right beside the other files, not in a sub-folder).

Step 4 — Run the one-click setup

In File Explorer, open **C:\napco-nucleus\scripts** and **double-click** **first-time-setup.bat**.

A black window opens and does everything automatically. When it asks, type:

When it asks for...	Type this
Your dev name	Atik
Napco share password	the password Titu gave you

If it shows an error about tasks or permissions, **right-click the .bat** → **Run as administrator** and let it finish. When the window says setup finished and the checks are green, you are done.

Step 5 — Test it

Make any Teams call for at least 20 seconds, wait about 2 minutes, then run this in PowerShell:

```
explorer \\172.16.205.123\nucleus-central\Atik\
```

Open today's date → **calls** folder. If you see files ending in **_mic.wav**, **_speaker.wav** and **.json**, it is working. Tell Titu you are done.

If something does not work

Problem	Fix
---------	-----

Nothing appears on the server	Run <code>ping 172.16.205.123</code> . If it fails you are not on the office network — connect to office LAN / VPN.
No microphone in the recording	Teams → Settings → Devices → set Microphone to your Windows default input.
“scripts disabled on this system”	Right-click <code>first-time-setup.bat</code> → Run as administrator.
