

# NAPCO Nucleus

## Developer Setup Guide

*Eight steps. Run every command in PowerShell on your Windows dev PC.*

### START HERE

## Before you begin

Run every command below in **PowerShell** on your Windows dev PC.

### What Titu sends you first

Titu will DM you these two files privately (they contain secrets — never share them publicly):

1. `.env` — save at `E:\Projects\NAPCO-Nucleus\.env` (after Step 1 clones the repo)
2. `google-credentials.json` — save at `E:\Projects\NAPCO-Nucleus\google-credentials.json`

*The Samba password is provided inline in Step 5 below.*

### STEP 1

## Clone the repo

Run in **PowerShell**:

```
cd E:\
mkdir Projects -Force
cd E:\Projects
git clone https://github.com/napco-labs/napco-nucleus.git NAPCO-Nucleus
```

### STEP 2

## Install Python packages

Run in `E:\Projects\NAPCO-Nucleus`:

```
cd E:\Projects\NAPCO-Nucleus
python -m pip install -r requirements.txt
```

### STEP 3

## Install Tesseract OCR

Run anywhere in **PowerShell**:

```
winget install UB-Mannheim.TesseractOCR
```

Then close and reopen PowerShell.

# NAPCO Nucleus

## Developer Setup Guide

*Eight steps. Run every command in PowerShell on your Windows dev PC.*

### STEP 4

## Place the files Titu sent you + set your dev name

Save the two files from the "What Titu sends you first" section above:

```
E:\Projects\NAPCO-Nucleus\.env  
E:\Projects\NAPCO-Nucleus\google-credentials.json
```

Open the .env file in Notepad. Find this line:

```
NUCLEUS_DEV_NAME=Titu
```

Replace Titu with **your** name. Use one of these exactly:

```
Assad Rocky Ferdows Titu Atik Isruk Amin
```

Save. Close.

### STEP 5

## Cache the Samba password

Run in **PowerShell**:

```
cmdkey /add:172.16.205.123 /user:nucleus /pass:E7CqJ0d1oHox7HTjxNp_osD_fSyUe59I
```

Verify:

```
Test-Path \\172.16.205.123\nucleus-central
```

**Expected output:** True

### STEP 6

## Install the voice daemon

Run in **E:\Projects\NAPCO-Nucleus**:

```
cd E:\Projects\NAPCO-Nucleus  
.\scripts\register-voice-daemon-task.ps1  
Start-ScheduledTask -TaskName 'NAPCO Nucleus - Voice Daemon'
```

### STEP 7

## Install chat-push tasks

Run in **E:\Projects\NAPCO-Nucleus**:

# NAPCO Nucleus

## Developer Setup Guide

*Eight steps. Run every command in PowerShell on your Windows dev PC.*

```
cd E:\Projects\NAPCO-Nucleus
.\scripts\register-chat-push-task.ps1
```

### STEP 8

## Test

Make a Teams call (any short call). Wait 2 minutes. Then run in **PowerShell**:

```
$you = ((Select-String -Path E:\Projects\NAPCO-Nucleus\.env -Pattern
'^NUCLEUS_DEV_NAME=').Line -replace 'NUCLEUS_DEV_NAME=', '').Trim()
$today = Get-Date -Format "yyyy-MM-dd"
Get-ChildItem "\\172.16.205.123\nucleus-central\${you}\$today\calls\"
```

**Expected:** your call files (\*\_mic.wav, \*\_speaker.wav, \*.json, \*\_transcript.md).

**Setup is complete.**

### HELP

## If a step fails

**Tail the voice daemon log:**

```
Get-Content E:\Projects\NAPCO-Nucleus\logs\voice_daemon.log -Tail 50
```

scripts disabled on this system **error in Step 6 or 7:**

```
powershell.exe -ExecutionPolicy Bypass -File .\scripts\register-voice-daemon-task.ps1
```

(Use the same form for register-chat-push-task.ps1.)

**Test-Path in Step 5 returned False:**

```
ping 172.16.205.123
cmdkey /list:172.16.205.123
```

**Mic missing from recordings:**

Teams → Settings → Devices → set Microphone to your Windows default input.

### UPDATE

## Update the system later

# NAPCO Nucleus

## Developer Setup Guide

*Eight steps. Run every command in PowerShell on your Windows dev PC.*

*Run in **E:\Projects\NAPCO-Nucleus**:*

```
cd E:\Projects\NAPCO-Nucleus
git pull
python -m pip install -r requirements.txt
Stop-ScheduledTask -TaskName 'NAPCO Nucleus - Voice Daemon'
Start-ScheduledTask -TaskName 'NAPCO Nucleus - Voice Daemon'
```

### UNINSTALL

## Uninstall

---

*Run in **E:\Projects\NAPCO-Nucleus**:*

```
cd E:\Projects\NAPCO-Nucleus
.\scripts\register-voice-daemon-task.ps1 -Unregister
.\scripts\register-chat-push-task.ps1 -Unregister
cmdkey /delete:172.16.205.123
```
